Abstract

The scientists are nearer to God Particle. How far the ‘God’ of science, meant Consciousness, is from God Particle? The speculative response to this relevant question has given birth to this paper. From Higgs-Boson, the Mother Matter, to consciousness we have several milestones to understand. e.g. dark matter, dark energy, their source and a big picture of information. Does all this have anything to do with the occasion of origin of life-form? Does it have any repercussion on cell biology, neuroscience and human behavior? A preliminary sketch has been developed in the course of this paper and a time frame has been stated as required for rationalization of consciousness by the mind of Homo sapiens.
