

# ENERGY AND SPIRITUALITY

**B. S. K. Naidu**

*Institute of Energy Management and Research, Gurgaon, India*

## **Abstract**

Energy environment interface has a divine dimension. The fossil fuel (decayed remains of plants and animals) dominated energy generation accounts for  $\approx 60\%$  Of the green house gas emissions responsible for global warming & pollution. Nations depending more on the naturally gravitating water falls have blossoming economies. A change in mindset Of communities can swing the development process in favour of a safe and prosperous common future.

Energy and consciousness being at the root of all cosmic creation can never be separated in the entire supply chain from generation to distribution. This depth of understanding from Indian philosophy can be imbibed into the deeper paradigms of learning energy management through 3-orbits of education, graduating from intellectual inputs to emotional intelligence and further to social/spiritual consciousness.
