Abstract

Biological, Mathematical and Social Scientists have been attempting since long to find the error-free cell with complete specification, equation to completely describe an event or society but have often resulted in frustrating the so whole human hearted efforts and were forced to go into an unknown area of research into each science which will minimize the errors in results. In this paper, we will attempt to find out the nature of reality by studying the spiritual Hierarchies and the possibility of existence of a spark of life (Soul). Also, attempts will be made to study the relation of “various forms of material energy” and its relation to existence of equations of both biometrics and physical mathematics. A parallelism and convergence mechanism for understanding the differences in simultaneity (achintya bheda-a-bheda) will be delineated. It is expected that an understanding of spiritual hierarchies will be developed to understand the super soul and various forms of existence of energies and its reason as existence of incomplete manifestation of parts of the complete (as mentioned in Brahma Samhita).
