Abstract

There are several scientific models to solve the origin of life problem. These models are an attempt to solve the problem from different views of understanding. However none of the models have been accepted unanimously to be correct and have failed to solve the origin of life problem. This article summarizes the challenges faced by the few of the existing models for the origin of life. This article will ignite spark within mind of a sincere seeker for the solution of origin of life problem. It will raise a question that is there anything more to be known before we can understand the origin of life.
